241016 / FoF5 · z=35 (zero-based) · 58 intersecting dominant components

A Green + red fluorescence

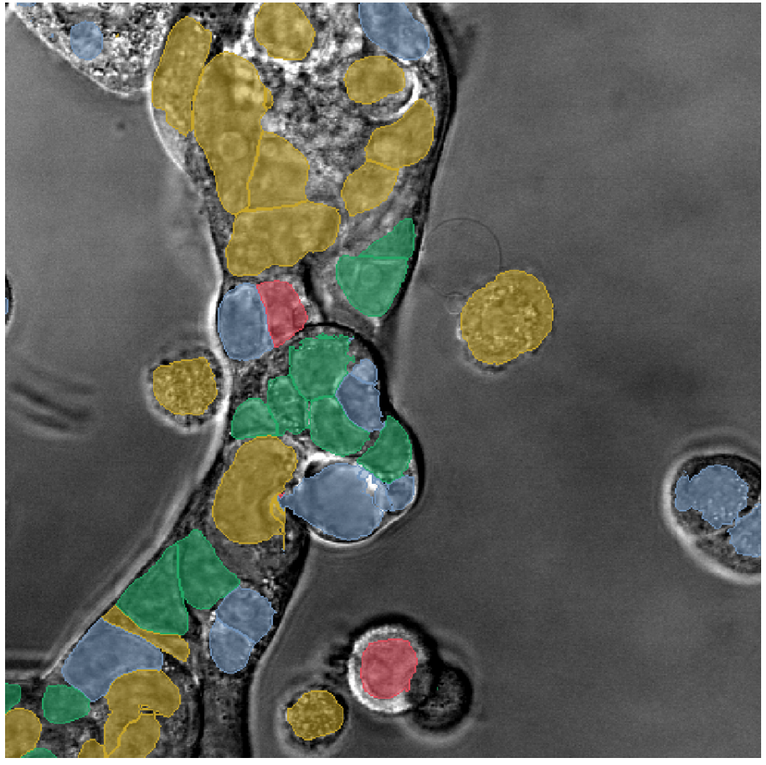

B Previous four-state gates

Green / red / both / neither: 14 / 19 / 3 / 22

C Conditional thresholds

Green / red / both / neither: 14 / 4 / 21 / 19

Green only Red only Both Neither

White outlines in A match the colored objects in B/C. Calls use 3D local-background measurements; fluorescence display ranges are fixed.
Every original label receives a state. Neither is the residual rule outcome, including a weak signal in only one channel; it is not a cell-cycle phase.
