241016 / FoF5 · z=15 (zero-based) · 299 intersecting dominant components

A Green + red fluorescence

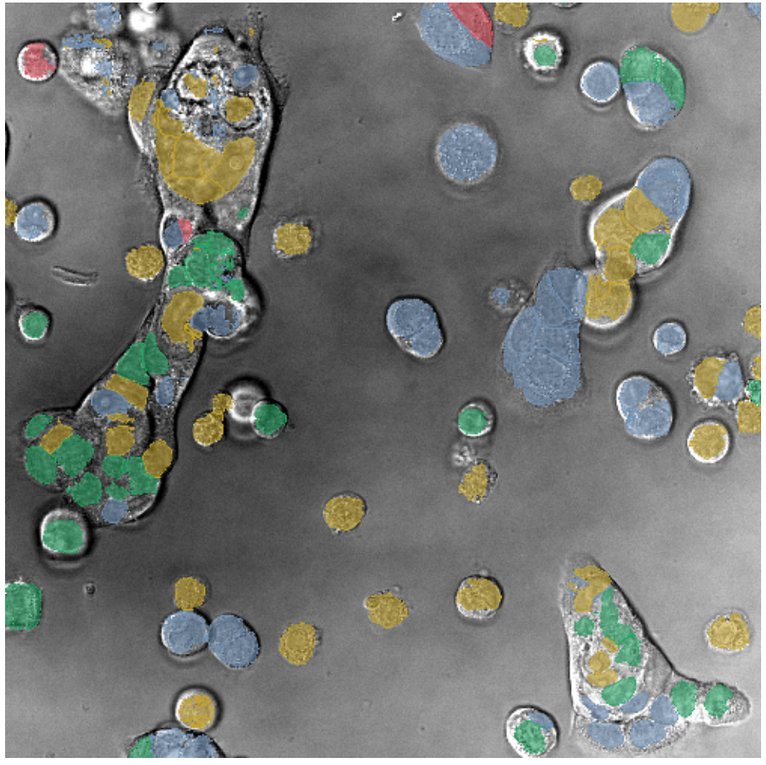

B Previous four-state gates

Green / red / both / neither: 57 / 49 / 12 / 181

C Conditional thresholds

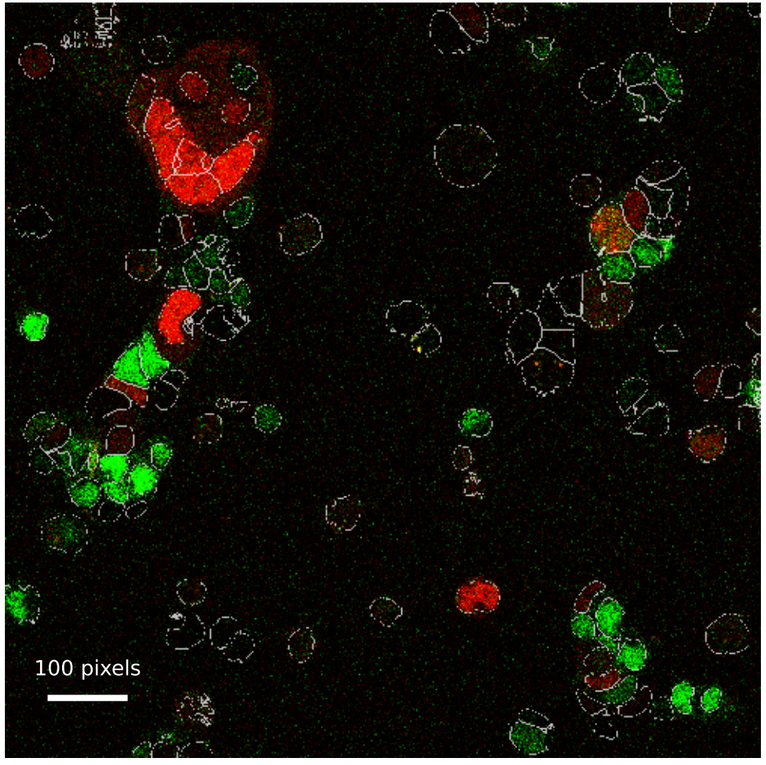

Green / red / both / neither: 52 / 6 / 89 / 152

Green only Red only Both Neither

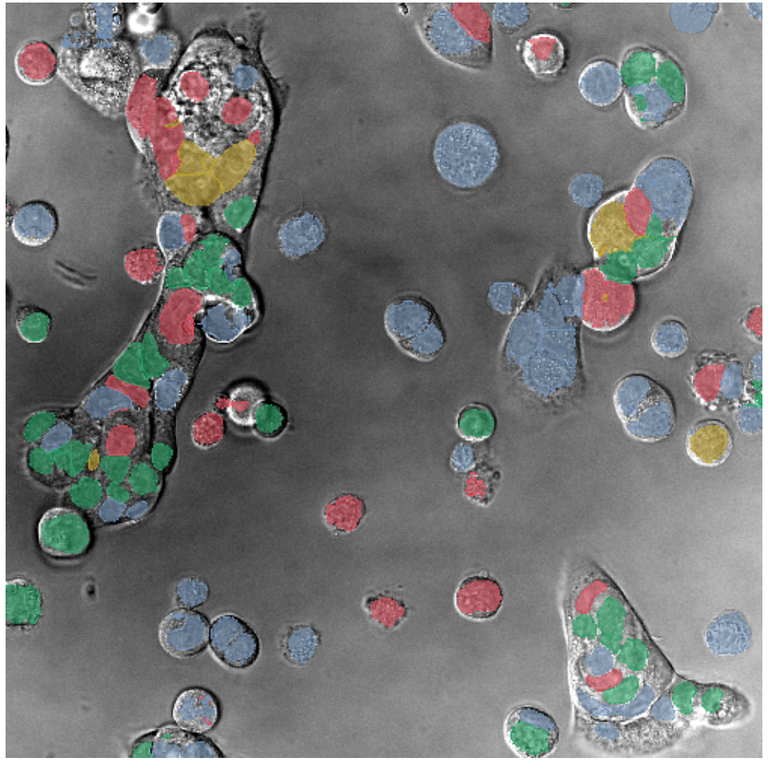

White outlines in A match the colored objects in B/C. Calls use 3D local-background measurements; fluorescence display ranges are fixed.
Every original label receives a state. Neither is the residual rule outcome, including a weak signal in only one channel; it is not a cell-cycle phase.

241016 / FoF5 · z=25 (zero-based) · 224 intersecting dominant components

A Green + red fluorescence

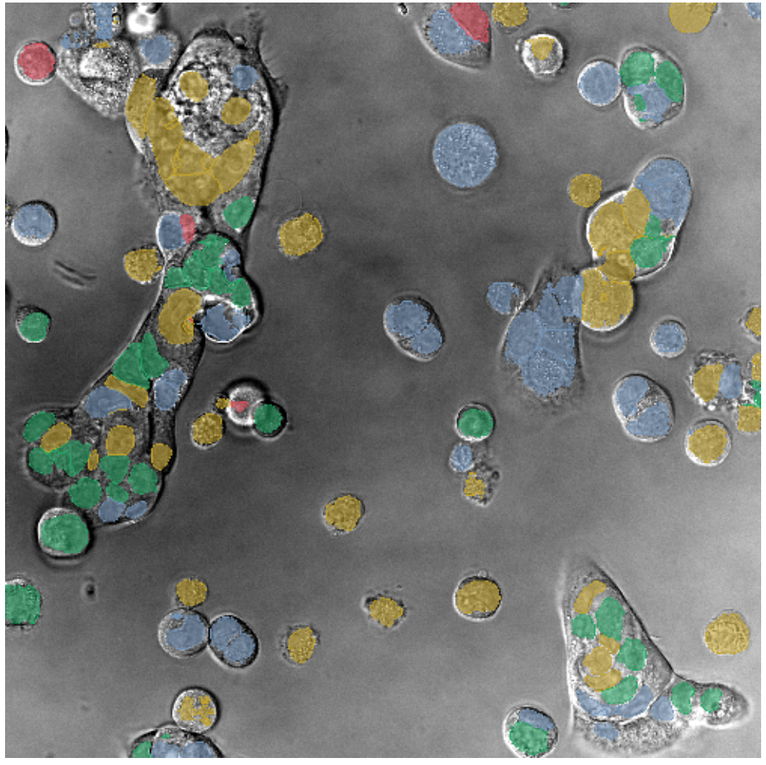

B Previous four-state gates

Green / red / both / neither: 47 / 43 / 12 / 122

C Conditional thresholds

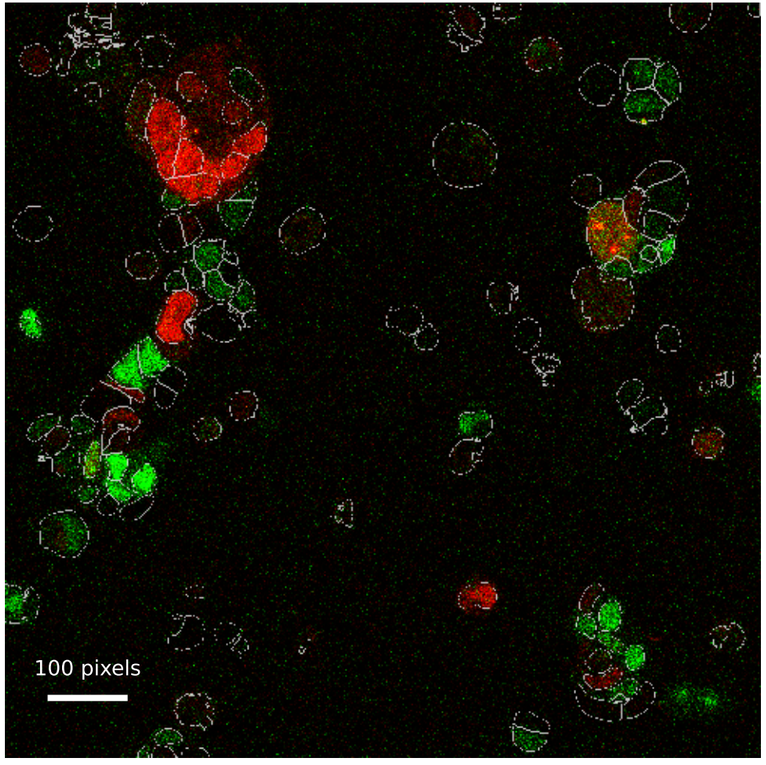

Green / red / both / neither: 44 / 6 / 77 / 97

Green only Red only Both Neither

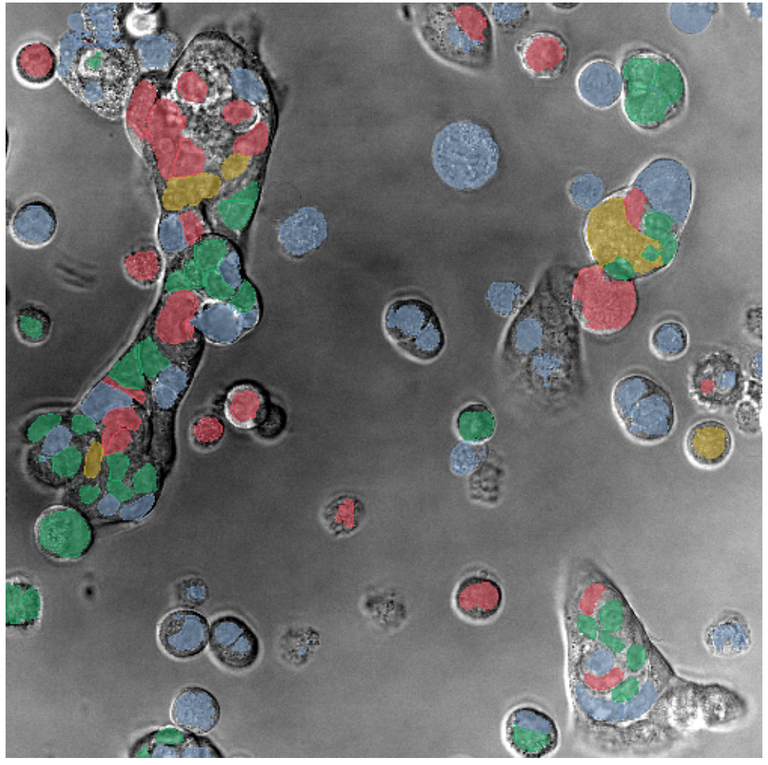

White outlines in A match the colored objects in B/C. Calls use 3D local-background measurements; fluorescence display ranges are fixed.
Every original label receives a state. Neither is the residual rule outcome, including a weak signal in only one channel; it is not a cell-cycle phase.

241016 / FoF5 · z=35 (zero-based) · 180 intersecting dominant components

A Green + red fluorescence

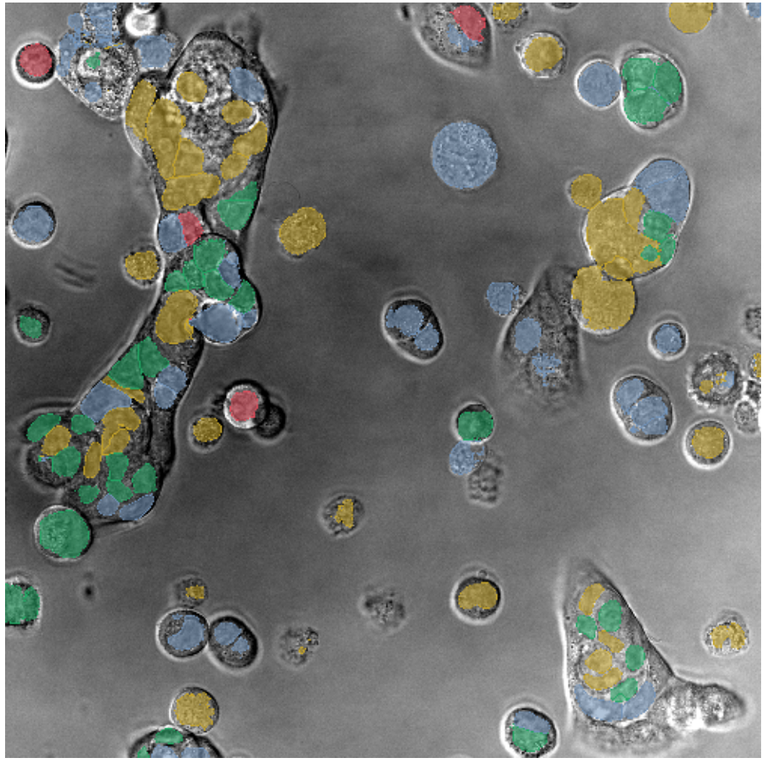

B Previous four-state gates

Green / red / both / neither: 41 / 31 / 5 / 103

C Conditional thresholds

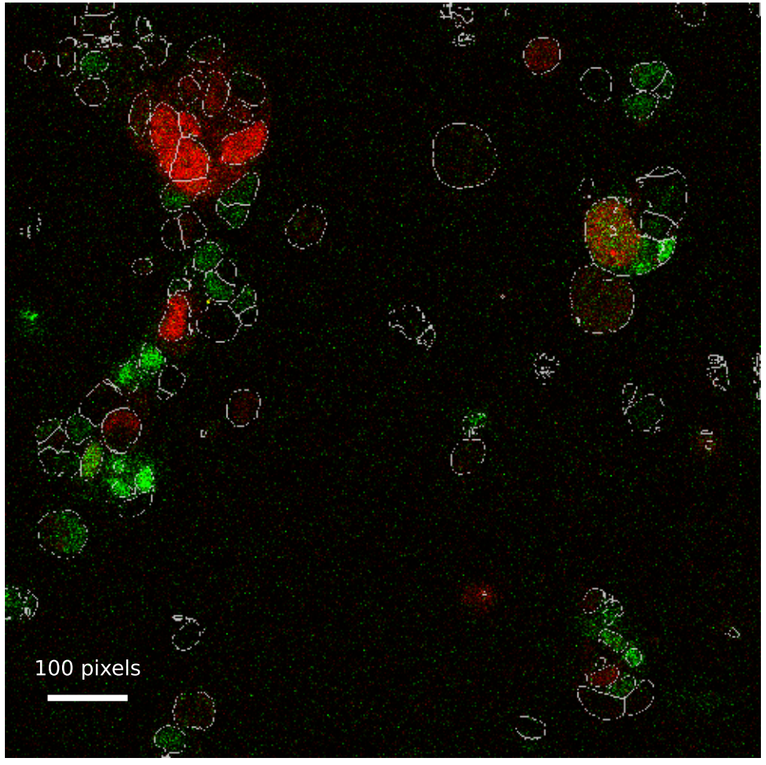

Green / red / both / neither: 39 / 6 / 48 / 87

Green only Red only Both Neither

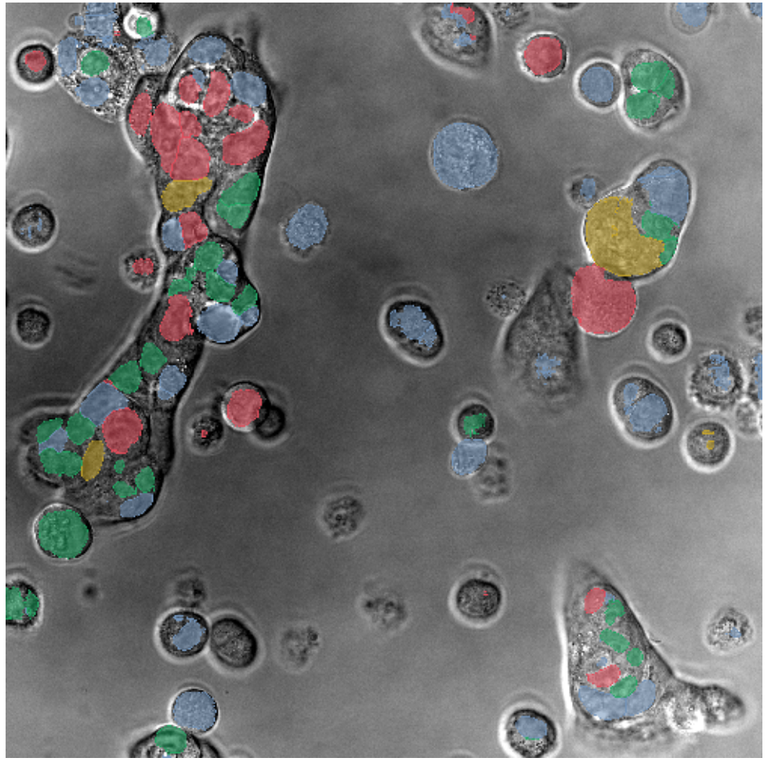

White outlines in A match the colored objects in B/C. Calls use 3D local-background measurements; fluorescence display ranges are fixed.
Every original label receives a state. Neither is the residual rule outcome, including a weak signal in only one channel; it is not a cell-cycle phase.

241016 / FoF5 · z=45 (zero-based) · 168 intersecting dominant components

A Green + red fluorescence

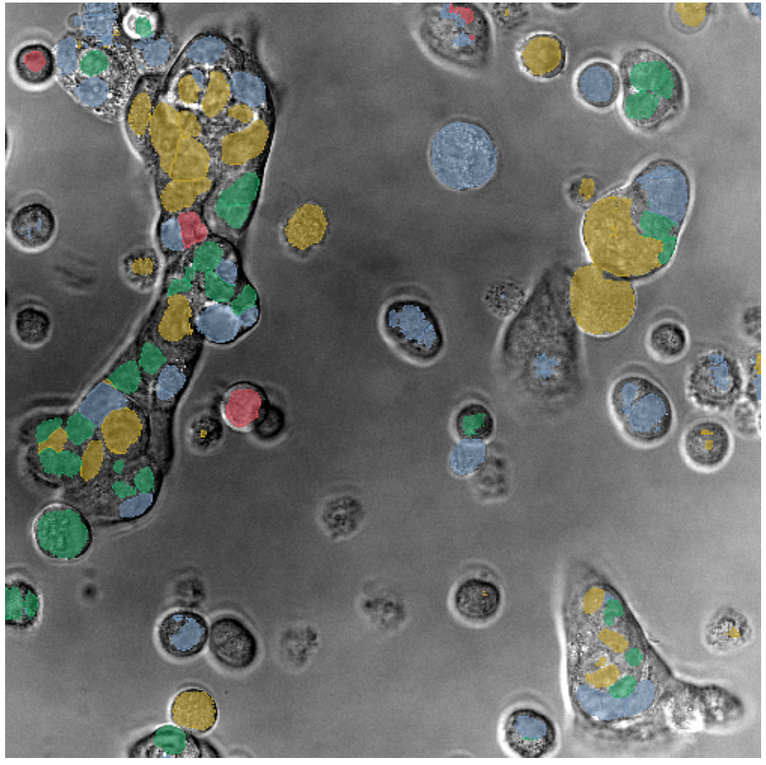

B Previous four-state gates

Green / red / both / neither: 36 / 27 / 5 / 100

C Conditional thresholds

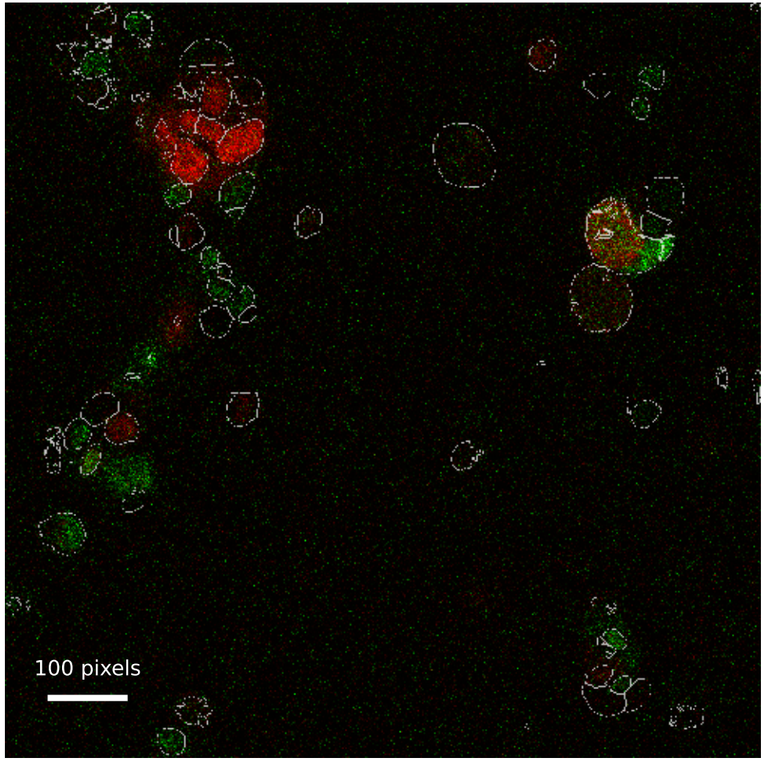

Green / red / both / neither: 35 / 4 / 42 / 87

Green only Red only Both Neither

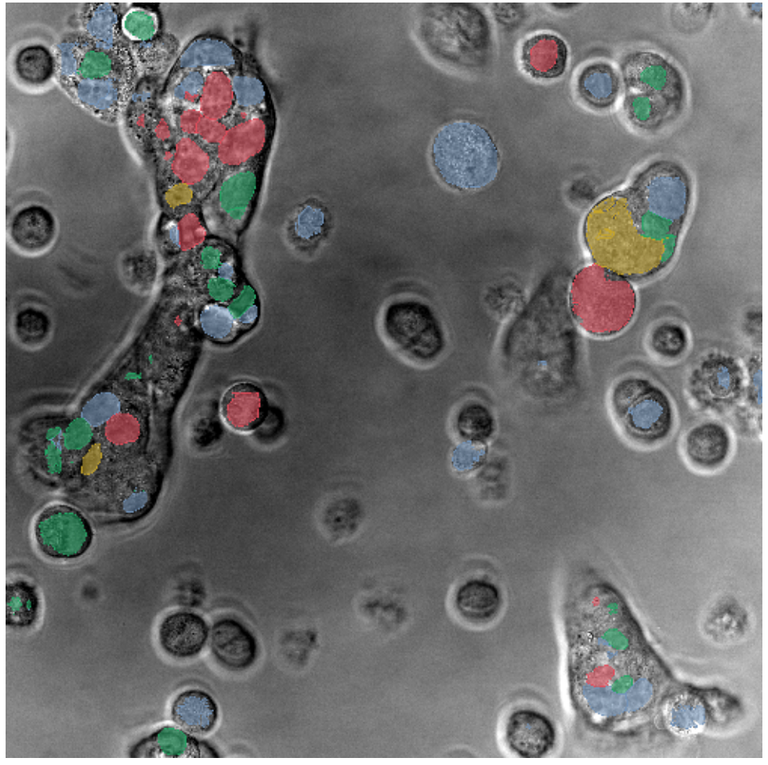

White outlines in A match the colored objects in B/C. Calls use 3D local-background measurements; fluorescence display ranges are fixed.
Every original label receives a state. Neither is the residual rule outcome, including a weak signal in only one channel; it is not a cell-cycle phase.

241016 / FoF5 · z=55 (zero-based) · 100 intersecting dominant components

A Green + red fluorescence

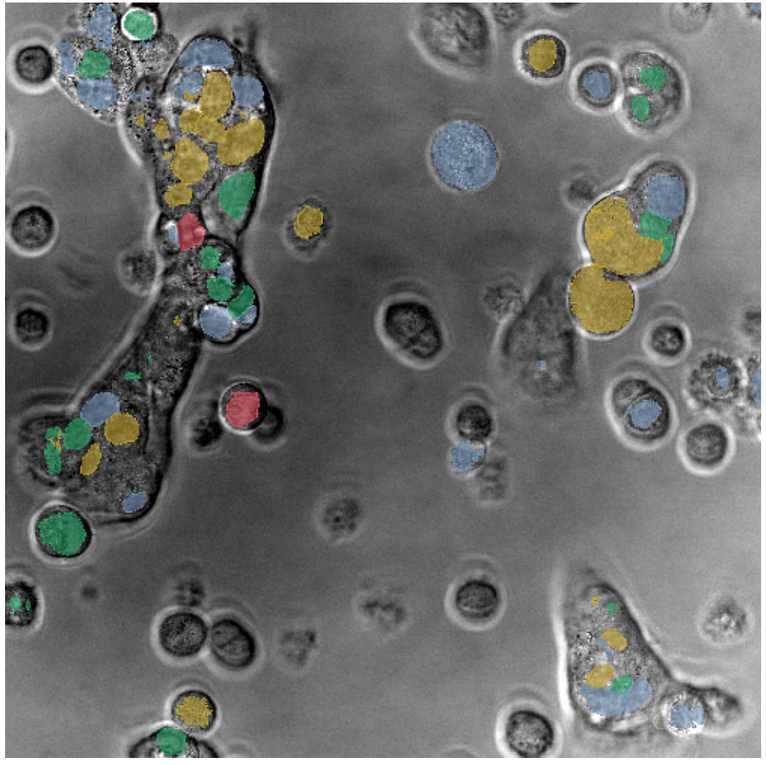

B Previous four-state gates

Green / red / both / neither: 25 / 17 / 4 / 54

C Conditional thresholds

Green / red / both / neither: 24 / 2 / 24 / 50

Green only Red only Both Neither

White outlines in A match the colored objects in B/C. Calls use 3D local-background measurements; fluorescence display ranges are fixed.
Every original label receives a state. Neither is the residual rule outcome, including a weak signal in only one channel; it is not a cell-cycle phase.
