241016 / FoF5 · z=35 (zero-based) · 58 intersecting dominant components

A Green + red fluorescence

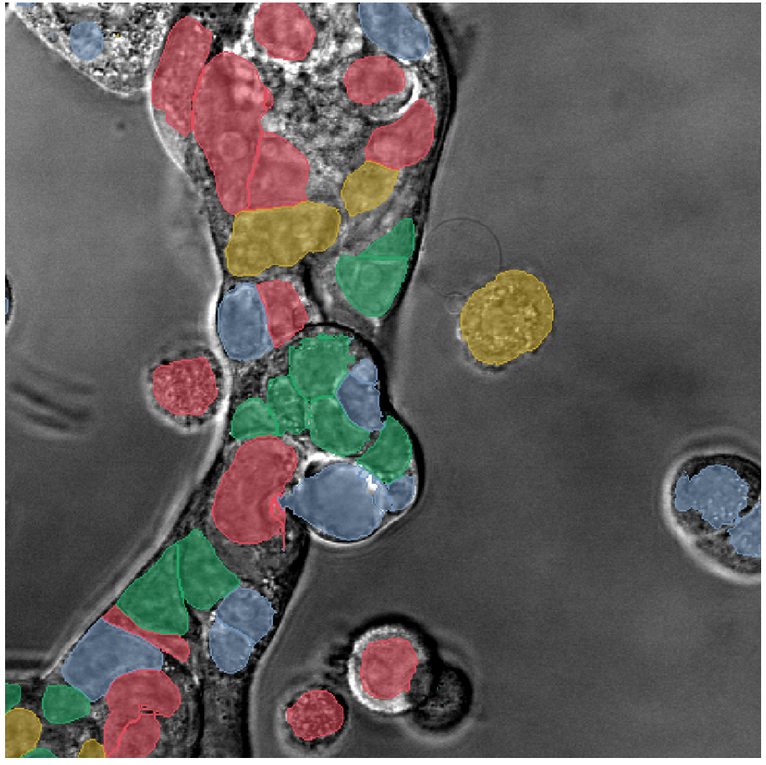

B Original classifier, rerun

Green / red / both / neither: 14 / 19 / 3 / 22

C Neither → both refinement

Green / red / both / neither: 14 / 19 / 6 / 19

Green only Red only Both Neither

White outlines in A match the colored objects in B/C. Calls use 3D local-background measurements; fluorescence display ranges are fixed.
Original code is rerun on measurements. Lower gates can change only its neither results to both; all four states remain available.
