241016 / FoF5 · z=35 (zero-based) · 180 intersecting dominant components

A Green + red fluorescence

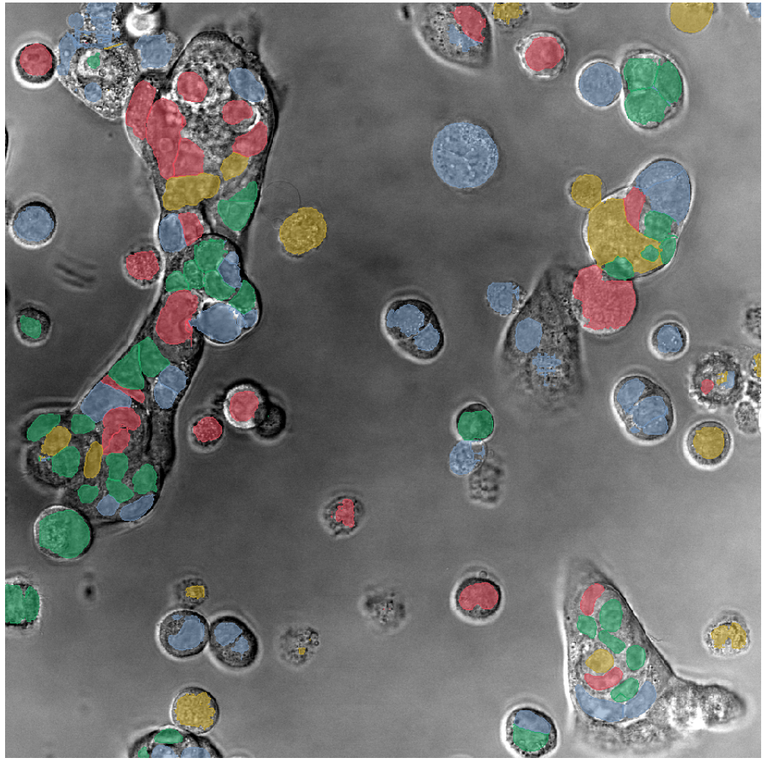

B Original classifier, rerun

Green / red / both / neither: 41 / 31 / 5 / 103

C Neither → both refinement

Green / red / both / neither: 41 / 31 / 21 / 87

Green only Red only Both Neither

White outlines in A match the colored objects in B/C. Calls use 3D local-background measurements; fluorescence display ranges are fixed.
Original code is rerun on measurements. Lower gates can change only its neither results to both; all four states remain available.
